

Excel Notes

Navigation

- ctrl + arrow key to come to move

Insert / Delete Rows & Columns

- ctr + plus - Insert a row/column(by default it insert row)
- ctr + minus - Delete a row/column(by default it delete column)
- or we can click on insert and delete option in home tab as well
- To use this commands please select the specific row or column you can do this easily with (ctrl + shift + arrow key)

Dynamic Table

- ctrl + T - Dynamic table or in Home section choose format as table
- For deleting dynamic table/convert back to original form
- Go to table design → Convert to range → Go to home section → Select clear format

Fast Data Entry

- Go to quick access toolbar, then more commands and add form in excel then we can do it faster, with tab and enter

Transpose

- Copy the data with ctrl + C then paste special → Transpose or use ctrl + alt + V

Filter

- Home → Sort & Filter → Filter
- (In dynamic table filters can easily used without manually command it we can see on every column arrow button)

Dynamic Table Total Row

- In table design section there is a option called total rows we can check it and use that features

Remove Duplicates

- Go to Data → Remove Duplicates

Drop Down List

- Go to Data → Data Validation
- Allow → List
- Source: comma separated items or select existing cells
- To remove: Data Validation → Clear All
- Find & Select → Data Validation to locate existing validation

Remove Blank Rows

- Ctrl + G → Special → Blanks → OK → ctrl + minus

Copy Table from Google

- Copy unformatted table, create reference values like abA1 and abA2, drag down, use Ctrl + H (Replace), replace assumed alphabets with =, copy output, Paste Special → Values, then delete unformatted table.

Text to Columns

- Data → Text to Columns → Delimited → Next → Choose delimiter → Finish

Copy Entire Sheet

- Press Control and drag the sheet to move to new sheet

Autofit

- Column: alt + H + O + I
- Row: alt + H + O + A

Flash Fill

- ctrl + E (flash fill)

Remove Extra Spaces

- Formula: =trim(cell address)
- Then copy and Paste Special → Values

Find Day from Date

- Formula: =text(cell_address,"dddd")

Fill Blank Cells with NA

- Ctrl + G → Special → Blanks → Type NA → Ctrl + Enter

Remove Gridlines

- Page Layout → Unselect Gridline View

Freeze Header Row

- View → Freeze Panes → Freeze Top Row

Upper Case

- Formula: upper(celladdress)
- Then paste as values because it will take reference

Lookup Functions

- =vlookup(search_key,table,searching_column_number,0) fix it with f4(with this result will come accurate)
- =xlookup(search_key,search_key_range,result_range) we can done it horizontally as well
