

□ Git & GitHub Notes

■ Running the Project Locally

Step 1: Open Terminal in your project folder.

```
cd tab
```

Step 2: Run the project.

```
npm run dev
```

■ Clone an Existing GitHub Repository

Step 1: Open a terminal and go to the folder where you want to save the project.

```
cd tab
```

Step 2: Clone the repository.

```
git clone
```

■ Update Code and Push to GitHub

Step 1: Setting global flags

```
git config --global user.name "Rajat Ohri"
```

```
git config --global user.email "rajatkumarohri04@email.com"
```

Step 2: Checking status (red files means untracked)

```
git status
```

Step 3: Tracking changes

```
git add .
```

Step 4: Giving name to the version

```
git commit -m "first commit"
```

Step 5: Check status again (now saying to push)

```
git status
```

Step 6: Push the code

```
git push
```

■ Push an Existing Project to GitHub

Step 1: Open Terminal in Your Project Folder.

```
cd "C:\Users\YourName\Desktop\CSS Project"
```

Step 2: Initialize Git (only once)

```
git init
```

Step 3: Add all files

```
git add .
```

Step 4: Commit

```
git commit -m "Initial commit"
```

Step 5: Create a GitHub repository

Go to GitHub and click New Repository.

Step 6: Connect local folder to GitHub

```
git remote add origin https://github.com/USERNAME/css-project.git
```

Step 7: Show changed files

```
git status
```

Step 8: Push the project

```
git branch -M main
```

```
git push -u origin main
```

Now your code is on GitHub.
